

Example of How to Outline Systemic Changes in Results Chains RisiAlbania

Systemic change is an important component of what Risi strives for. A change is considered systemic when *“it has taken root in the market system, when new and improved behaviors of permanent market players are sustained, independent of project support and manifest themselves beyond the market players the project has partnered with”*¹.

Visualizing the systemic changes each intervention aims for is essential: all RCs will represent the expected copying and crowding-in where relevant and expected. Intervention RCs do not only include the results expected as a direct consequence of the project’s activities, but also the indirect changes and impact; external factors and the influence of the context, the assumptions between each result, will have to be also carefully monitored (see next sections).
